

cheflinc™

Cloud-based remote oven management made simple.

COOK | CONNECT | CONTROL

Empower your menu and your business with data-driven insights from ChefLinc. This cloud-based remote oven management system features an easy-to-use dashboard for operators to seamlessly push and pull recipes, view oven status, collect and store data, receive detailed service diagnostics and more.

ALTO-SHAAM®

Connected Insights.

View real-time connectivity status, cooking state, HACCP data, service alerts and more from any location. Stay connected with the ability to email selected alerts to a customized list or service provider outside of ChefLinc software.

Next-Level Service.

Understand alerts, minimize oven downtime and reduce service calls with real-time service diagnostics, detailed alert codes and comprehensive action steps. Receive accurate, reliable service support with reports. Ensure ovens are operating properly with updated software automatically pushed to ovens. No need to manually upload and download software via USB.

Consistent Settings.

Streamline oven management with the ability to categorize and group ovens by location, menu or any other factor. Push specific settings to oven groups such as brightness, volume, preheat settings, language and more.

Intentionally Simple Design.

Easily navigate the dashboard with icons, descriptions, pictures and filtering. An overview homepage allows operators to view locations, units and any alerts. Admin, unit settings, libraries, reports and locations pages are also intuitive to operate.

Reliable Data.

Effortlessly record, monitor and store operational cooking and cleaning data to improve kitchen efficiency and maximize profits. Twelve detailed reports provide data-driven insights.

Effortless Recipe Management.

Create, manage and push recipes, regional menus and limited-time offers with a company library. Explore Alto-Shaam's global library for culinary inspiration and to easily add new recipes to your company library. The capability to push and pull oven recipes reduces variables for error and ensures consistency across multiple locations. Save time and labor by eliminating the need to transfer and upload recipes via USB or manually program recipes onto ovens.
